Please note:

Looking at these trees, I found in most cases the pears are in fair to good condition, some of the trees are in stress which can be contributed to high heat, lack of water, and smog. The trees leaves are beginning to curl which is a sign that fall is approaching and they are about to loose their leaves. Overall I found most of the trees to be in fair to good condition, there are (7) trees that will need to be removed as well as (1) stump. Please note the tree that fell at 5368 E 2nd St fell due to heart rot in where decay set in which in turn weakened the trees structural stability causing the tree to fall.
